

# A Cleaner Proof Board For ProfitBot Gold

The goal is to show the evidence in a way a buyer can understand: what was tested, what the result was, what the risk looked like, and why normal vs stress matters.

This is not a promise page. It is a proof board that explains the mechanism and shows Research/SIM results before any access discussion.

## Quick Context Before The Screenshots

A normal run shows how the system behaved under its research settings. A stress run adds tougher cost/slippage assumptions to see whether the picture remains strong. Drawdown is the maximum equity drop, and Profit Factor compares gross wins against gross losses.

Range: 2016-05-04 to 2026-05-04

## Ten Years - Normal Research Run

Research view using the normal strategy settings.

Net

**\$99,921.40**

Drawdown

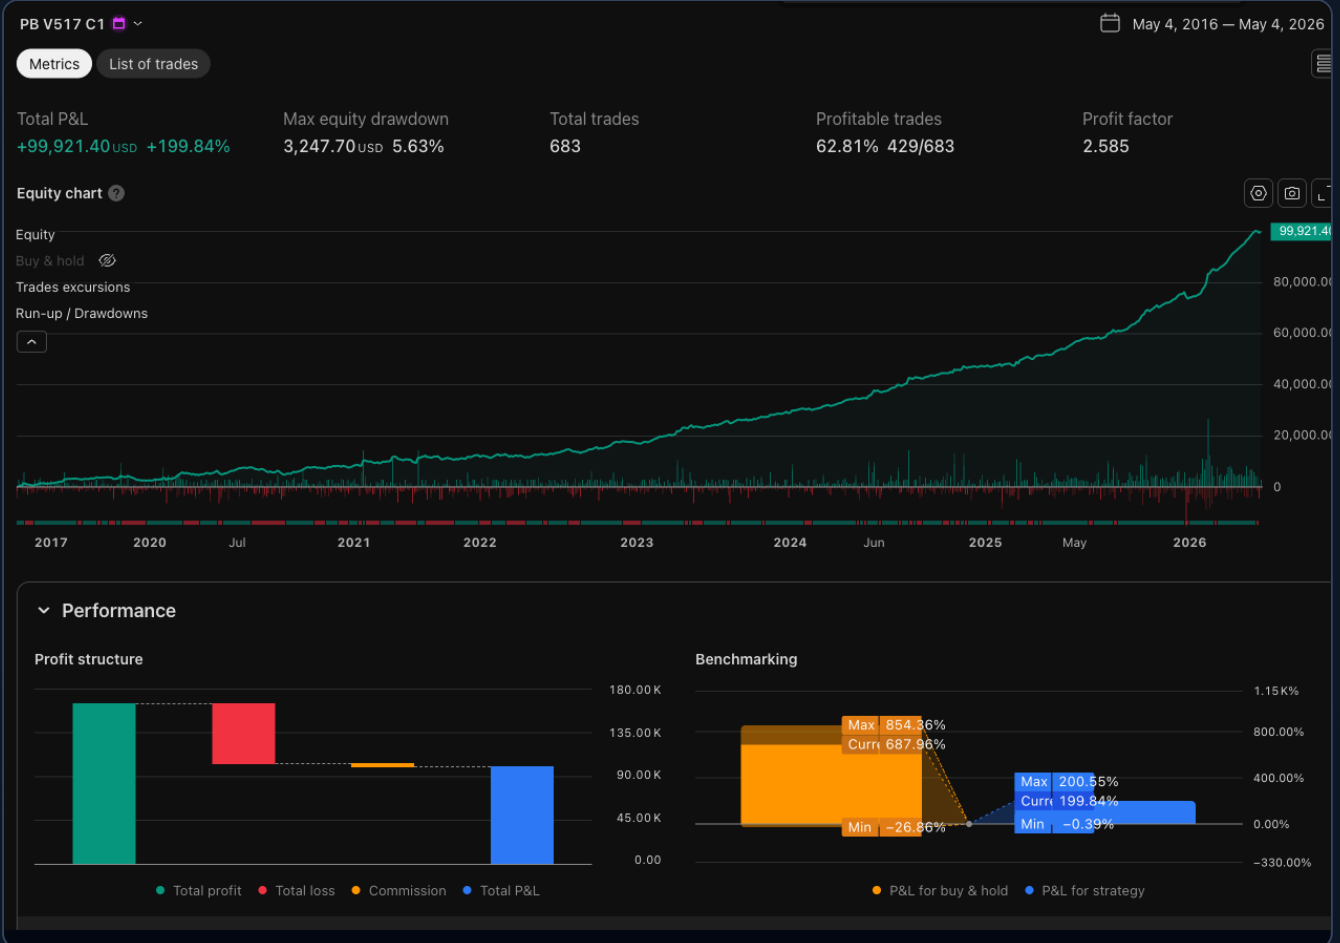

**\$3,247.70**

Trades

**683**

Profit Factor

**2.585**

The screenshot is cropped only for cleaner presentation. The TradingView result itself is not altered.

Range: 2016-05-04 to 2026-05-04

## Ten Years - Stress Research Run

A stricter cost/slippage view used to test whether the system stays robust under tougher assumptions.

Net

**\$76,406.40**

Drawdown

**\$4,933.80**

Trades

**679**

Profit Factor

**2.03**

The screenshot is cropped only for cleaner presentation. The TradingView result itself is not altered.

Range: 2022-05-04 to 2026-05-04

## Recent Four Years - Stress Control

Recent-market control to verify the newer edge remains strong under stricter assumptions.

Net

**\$78,390.00**

Drawdown

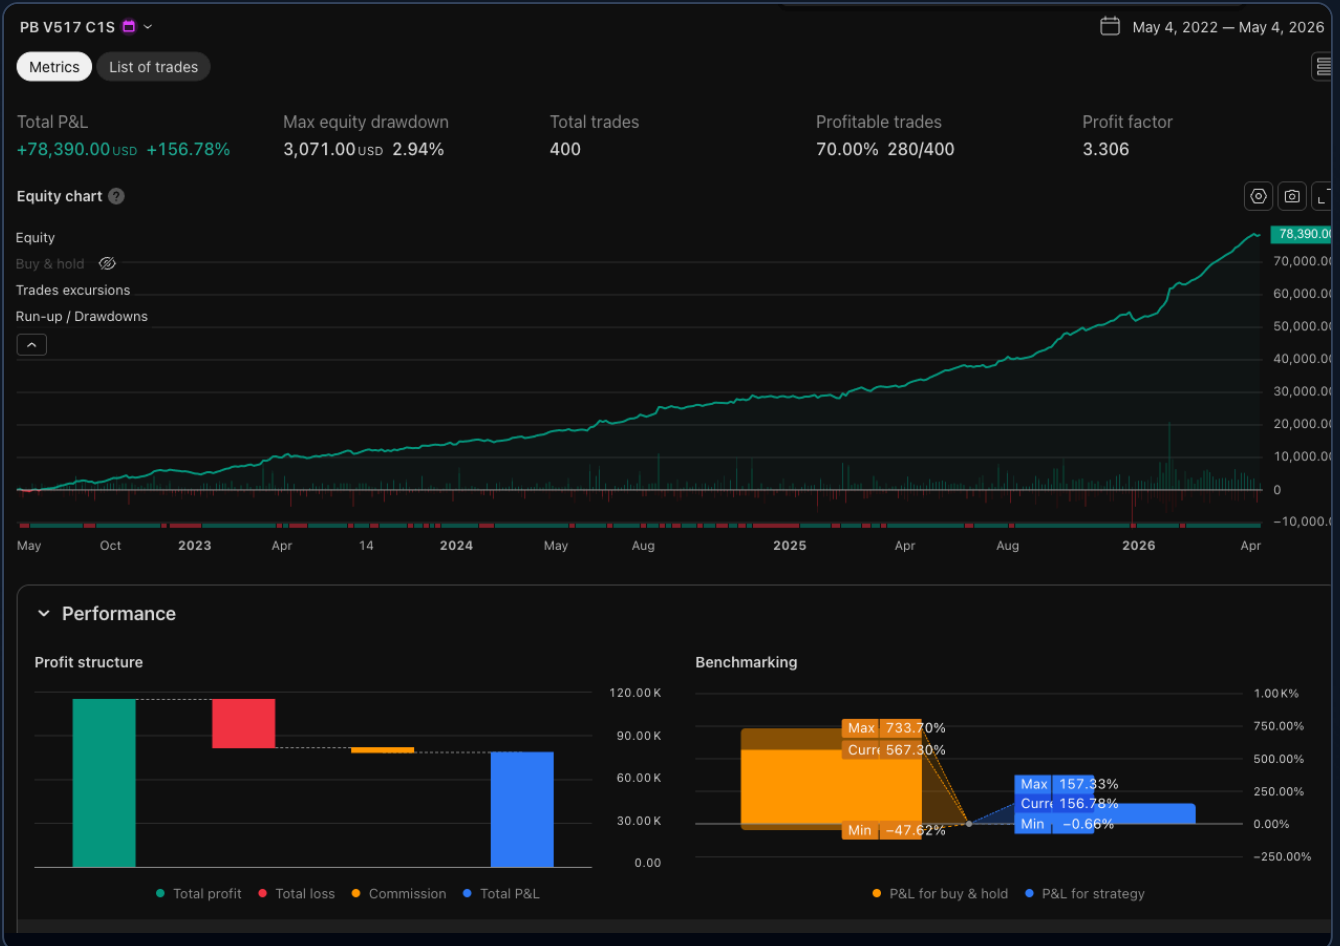

**\$3,071.00**

Trades

**400**

Profit Factor

**3.306**

The screenshot is cropped only for cleaner presentation. The TradingView result itself is not altered.

Professional boundary: ProfitBot Gold is TradingView software and a research workflow. It is not investment advice, account management, or a profit guarantee. Backtested or stress-tested results do not guarantee future performance.
